Workshop Registration: API and Commands

EECS 3311 B: Workshop Registration Practice

Registration(String id, int hours, boolean inductionCompleted)
String id() int hours() boolean inductionCompleted() RegistrationStatus status()
RegistrationStatus: PENDING, CONFIRMED, DECLINED
WorkshopPolicy: boolean permits(Registration registration)
DurationPolicy implements WorkshopPolicy
RegistrationService(WorkshopPolicy policy)
void confirm(Registration registration)
recordDecision(boolean permitted) is supplied for the service's controlled state change.

JUnit imports:
import org.junit.jupiter.api.Test;
import static org.junit.jupiter.api.Assertions.*;

@Test marks a test method.
assertEquals(expected, actual); compares expected and observed values.
assertTrue(condition); checks a condition.
assertSame(expectedObject, actualObject); checks object identity.
assertThrows(ExceptionType.class, () -> action()); checks a rejected action.
Use an actual method call in place of action().

Run from the extracted practice folder, including in VS Code's integrated terminal:
java -version
javac -version
Mac/Linux: bash run-tests.sh
Windows PowerShell: .\run-tests.cmd
All platforms: java tools/PracticeRunner.java
One test class: java tools/PracticeRunner.java StudentTests
Package work: java tools/PackagePractice.java YOUR_STUDENT_NUMBER

Initial scaffold: 4 successful, 0 failed. The TODO methods are not tested by this initial run.
After your three requested tests and a correct implementation: at least 7 successful, 0 failed.
Check results.txt after the latest run and inspect the created ZIP before optional upload.
